

Tomorrow's Sleep Disorder Care.

Today.

The Florida Neurological Center proudly announces the grand opening of its Sleep Disorder Center, a brand new 4-bedroom, state-of-the-art sleep clinic.

The FNC Sleep Disorder Center is staffed by a board-certified sleep medicine specialist from neurology, who works closely with colleagues in pulmonary medicine, ENT, dentistry, and psychology. The sleep lab is specifically designed to perform a variety of advanced studies in both pediatric and complicated adult cases.

Each sleep suite is elegantly appointed with the latest

adjustable Comfort Max bed, overstuffed recliner chair, an individual bathroom, a 42-inch flat screen LCD TV, and high-speed Internet access. Each suite features a one-of-a-kind virtual ceiling that automatically changes from a beautiful sky to a dramatic Milky Way Galaxy scene to lessen anxiety and insomnia.

The new lab proudly joins the Florida Neurological Center & Solstice MRI Center at 2237 SW 19th Avenue (Easy Street). As the institute continues to evolve, updates to our center and knowledge program, including a chat room, will be made.

Each suite features a one-of-a-kind virtual ceiling that automatically changes from a beautiful sky to a dramatic Milky Way Galaxy scene.
